SUMMARY

Software engineering student at Vitebsk State Technological University focused on Java backend development. I build REST services with Spring Boot 3: microservices, JWT / OAuth2 security with Keycloak, Kafka messaging, PostgreSQL with Liquibase migrations, and Docker Compose environments. I have shipped a full-stack food delivery platform with a live demo, and I also build games: four Unity 6 (URP) projects in C# and a Java game with a public Windows release. Looking for an internship or junior role where I can grow on real tasks within a team.

SKILLS

Backend: Java 17, Spring Boot 3, Spring Web, Spring Security (OAuth2 Resource Server, JWT), Spring Data JPA, Bean Validation, Spring Kafka, Resilience4j, MapStruct, Lombok

APIs & architecture: REST, microservices, OpenAPI / Swagger, Spring Boot Actuator, OOP, SOLID basics

Security: Keycloak (SSO, roles, email verification), Google Sign-In, role-based access control

Databases: PostgreSQL, MySQL, H2, SQL, Liquibase

Tools & DevOps: Git, GitHub, GitHub Actions, Maven, Docker, Docker Compose, Testcontainers

Frontend (basic): React, Redux Toolkit, Next.js, TypeScript / JavaScript, Tailwind CSS

Game Dev: Unity 6, URP, C#, Prefabs and prefab variants, ScriptableObjects, New Input System, ProBuilder, Splines, post-processing, editor tooling

Also used: C++ (SFML), Python (TensorFlow / Keras)

PROJECTS

Aroma Food Delivery Platform

Java 17 · Spring Boot 3.5 · Spring Security · Kafka · Keycloak · PostgreSQL · Liquibase · Docker Compose · React

github.com/top-secret666/food · github.com/top-secret666/aroma-food · aromafood.vercel.app

- Built three Spring Boot microservices (user, restaurant, order), each with its own database, Liquibase migrations and Swagger docs; orders move through a full status lifecycle from PENDING to COMPLETED.
- Implemented authentication with JWT, Google Sign-In and Keycloak (OAuth2 Resource Server) with USER / MANAGER / ADMIN roles; services talk over HTTP and Apache Kafka.
- Set up two run modes — lightweight local (H2 + local JWT) and full Docker Compose (PostgreSQL, Kafka, Keycloak, Mailhog) — plus integration tests with Testcontainers; React + Redux client deployed on Vercel.

Tournament Arena (study project)

Java 17 · Spring Boot 3.5 · Spring Security · JPA · JWT · MySQL · Next.js 15 · TypeScript

github.com/top-secret666/Game_tournament_management

- Full-stack platform for managing League of Legends tournaments: REST API with JWT authentication, MySQL schema with seed data, and a Next.js 15 / React 19 interface.
- Tournament and player pages with search, status filters, statistics and a tournament creation form with a team picker.

GAME DEVELOPMENT (UNITY 6, URP, C#)

WonderDoor Unity 6, URP, C#, ProBuilder, Splines

github.com/top-secret666/WonderDoor

- Surreal first-person walk through giant corridors of coloured doors, a circular arc hall and a sunlit meadow room.
- Prefab / prefab-variant room hierarchy, interactable hinge doors, procedurally generated meadow, layer-limited window sunlight, and post-processing configured from code.

Backrooms Lab: Level 0 Unity 6, URP, C#, New Input System

github.com/top-secret666/backrooms

- Atmospheric first-person slice of Backrooms Level 0 with flickering fluorescent lights and a broken flashlight.
- Rigidbody FPS controller tuned through ScriptableObjects, event-based noise system (Observer), per-lamp flicker via MaterialPropertyBlock, and editor tools that build the level.

The Witcher: Moonlit Road Unity 6, URP, C#, pixel art

github.com/top-secret666/witcher

- Dark-fantasy pixel-art walk along a forest road that gradually reveals a moonlit castle.
- Walk-driven parallax rig, CPU-projected perspective road, custom URP ScriptableRendererFeature for the retro look, and mood presets in ScriptableObjects.

Witcher 02: Night Ride Unity 6, URP, C#, pixel art

github.com/top-secret666/witcher-02

- First-person night horse ride through fog and roadside pines towards a castle.
- Layered parallax, perspective road with steering, walk / canter / gallop gaits with camera motion, and URP post-processing; adapts to any aspect ratio.

OTHER PROJECTS

- **The Witcher: Chapter 1** (Java 17, Swing). Pixel-art horror visual novel on a small custom engine with MVP architecture (View → Presenter → Director → Domain). Windows build with bundled JRE (v1.1.0).
- **Genomic Data Analysis** (Python, TensorFlow / Keras). **Winner of a scientific and technical conference.** Co-developed a 1D CNN that classifies pathogenic RB1 gene mutations using ClinVar data.
- **Fireboy & Watergirl Multiplayer** (C++17, SFML, TCP). Coursework: co-op platformer with an authoritative server and a custom network protocol.
- **PromptLock Defender** (Python). Conference project: antivirus detecting AI-powered ransomware with seven detection modules (signatures, AST, entropy, ML classifier, process monitoring).

EDUCATION

Vitebsk State Technological University (VSTU), 2023 – 2027 (expected)

Faculty of Information Technologies and Robotics · Major: Information Technologies · Qualification: Software Engineer

LANGUAGES

English: B1 (Intermediate), actively improving spoken and technical English

Russian, Belarusian: native

AVAILABILITY

Unpaid internship: yes · Full-time: yes · Office or hybrid
